

- ①

A diagram of a plant cell. It features a large, irregular green outer boundary representing the cell wall. Inside, there is a large, light blue, bean-shaped structure representing the central vacuole. To the left of the vacuole is a large, dark blue, spherical nucleus with a smaller, lighter blue nucleolus inside it. Surrounding the nucleus and vacuole are various other organelles: several small, yellow, oval-shaped mitochondria with internal folds; several small, red, oval-shaped structures; and several small, green, oval-shaped structures. The entire cell is filled with a light green fluid representing the cytoplasm.
