

- ①

A diagram of a plant cell. It features a large, irregular green outer boundary representing the cell wall. Inside, there is a large, light blue, bean-shaped structure representing the central vacuole. To the left of the vacuole is a large, dark blue, spherical nucleus with a smaller, lighter blue nucleolus inside. Surrounding the nucleus and vacuole are several smaller, yellow, oval-shaped mitochondria with internal folds. There are also several small, red, oval-shaped structures and some small, yellow, circular structures scattered throughout the cytoplasm. A yellow, rectangular structure is visible near the top right of the vacuole.

[illegible]
